Evaluation order

1. D1 establishes natal promise and carries the highest interpretive priority.
2. Functional lordship, dignity, dispositors, aspects, conjunctions and configured yogas modify delivery.
3. The topic-specific divisional chart confirms; it does not manufacture an absent D1 promise.
4. BAV/SAV describes support for manifestation and timing context, never a verdict by itself.
5. MD is the environment and AD is the executor. Their ownership, placement, relationship and repetitions define timing themes.
6. D60 is a fine confirmation layer only when birth time is sufficiently accurate.

Sources, limits and terminology

Calculated layers

Swiss Ephemeris positions; Lahiri sidereal zodiac; mean nodes; D1/D2/D3/D4/D5/D9/D10/D11/D12/D16/D24/D60; functional lordship; dignity; configured aspects and yogas; dispositors; BAV/SAV; Arudhas; node controllers; Vimshottari MD-AD; sunrise-derived Bhava, Hora and Ghati Lagnas; birth-time perturbation.

Source hierarchy

BPHS-derived lordship, dignity, Varga, special-Lagna and yoga framework, paraphrased operationally.

P. V. R. Narasimha Rao integrated Varga-reading approach: every divisional chart is judged through its own Lagna, houses and lords.

Supplied Master Rulebook and worked examples: evidence hierarchy, Ashtakavarga, Arudha, node-controller and timing synthesis.

Rahu-Ketu Experience by P. Trivedi: node-controller observations used only as tagged supporting interpretation.

Unavailable or intentionally excluded

Shadbala, Bhavabala, planetary war, live transits, Pratyantardasha, event calibration and medical/longevity prediction are not calculated. Evidence completeness is not event probability. D60 and sunrise-derived factors require an accurate birth time.

Labels

Good = stronger configured support. Moderate = mixed or conditional support. Low = limited configured support or substantial cautions. These are qualitative software labels, not promises, certainty, diagnosis or fate.
